### New Delhi's relative isolation, India's tryst with terror

### Page 01 & 4 : GS 2 : International Relations / Prelims

Russian President Vladimir Putin's arrival in New Delhi for the 23rd India–Russia Annual Summit marks a high-visibility diplomatic moment for India. Despite the ongoing Ukraine conflict, Western sanctions, and an ICC arrest warrant against Mr. Putin, India extended an exceptional welcome, with Prime Minister Narendra Modi personally receiving him at Palam Air Force Base. The visit reflects India's attempt to balance its historical partnership with Russia while simultaneously deepening ties with the U.S. and Europe.

**PM welcomes Putin at airport in warm gesture, hails India-Russia partnership**

Kalol Bhattacharjee  
Saurabh Tripathi  
new delhi

In a special gesture, Prime Minister Narendra Modi welcomed Russian President Vladimir Putin at the airport, with a traditional welcome dance, given the recent peace efforts involving U.S. President Donald Trump. "We are very happy to welcome our friend, President Putin to India. Looking forward to our interactions later this evening and tomorrow. Our India-Russia friendship is a time-tested one that has greatly benefited our people," said Prime Minister Modi after greeting the Russian leader at the APB Palam.

Mr. Putin's first engagement started with a private dinner with Mr. Modi at the latter's official residence at 7 Lok Kalyan Marg. The Russian leader will receive a ceremonial reception at the airport on Friday. The first transit flight of Putin on Friday, which will be followed by a visit to Rajpath, where he will lay a wreath at the memorial to Mahatma Gandhi.

**On agenda**  
The India-Russia annual summit will commence at 11.30 a.m. at Hyderabad House, where Mr. Putin, the Russian leader, had visited India last on December 6, 2021 for the India-Russia annual summit. At the same time, Russia's First Deputy Prime Minister Denis Manturov, Minister of Internal Affairs S. Sitaram and discussed interbank, credit cooperation, expanding payment infrastructure and the India-Russia investment protection agreement.

Mr. Putin's first engagement started with a private dinner with Mr. Modi at the latter's official residence at 7 Lok Kalyan Marg. The Russian leader will receive a ceremonial reception at the airport on Friday. The first transit flight of Putin on Friday, which will be followed by a visit to Rajpath, where he will lay a wreath at the memorial to Mahatma Gandhi.

Timed with these discussions, Herman Gref, chairman of the Economic Research Foundation, the largest bank in Switzerland, met the media and announced that Russia and India have agreed to "normalize" their relations by ending the use of "short party

technology". Mr. Gref also said that the Swiss bank, which has launched First India, a closed-end mutual fund focused on Nifty50 index that will finance greater Russian investment into the Indian stock market.

Both Ministers reiterated that a bilateral partnership is required to maintain a shared peace and long-term respect, the Ministry of Defense said. Mr. Singh further underlined the need for continuing to strengthen India's defense, manufacturing ecosystem, under the "Atmanirbhar Bharat" vision, the Ministry said.

During the same time, Russia's First Deputy Prime Minister Denis Manturov, Minister of Internal Affairs S. Sitaram and discussed interbank, credit cooperation, expanding payment infrastructure and the India-Russia investment protection agreement.

With India now expected to cut its oil imports drastically in the wake of U.S. sanctions, India and Russia will on Friday discuss replacing at least some of those oil purchases with other commodities from Russia, as well as boosting Indian exports to Russia of produce and pro-

cessed foods, apparel, and some machinery, particularly over the newly developed Eastern Maritime Corridor from Chennai to Vladivostok.

Both sides will also push for more progress on the FTA between India and the Eurasian Economic Union (EEU) during the visit, even as Indian exporters hit by the U.S.'s 50% tariffs seek new markets.

#### Labour mobility

The India-Russia labour mobility agreement to be announced as the "centrepiece" of Mr. Putin's visit could be a crucial boost for Indian skilled and semi-skilled workers seeking jobs as other Western markets tighten their immigration controls.

**Nuclear pact**  
The same is true for nuclear power cooperation. On December 3, in response to a question in Parliament, the government said the Department of Atomic Energy had held talks with Russia's state-owned nuclear energy giant Rosatom about India's plans for five indigenous small modular reactors.

France and other EU member states are also bidding for these projects.

### Putin's visit a tense tightrope walk for Modi government amid Western sanction threats

#### NEWS ANALYSIS

Sohasini Haidar  
NEW DELHI

Prime Minister Narendra Modi and Russian President Vladimir Putin as they depart Palam Air Force Base in New Delhi on Thursday. AFP

U.S. had earlier threatened to impose sanctions under the Countering America's Adversaries Through Sanctions Act after India finalised a deal to buy S-400 air defence systems from Moscow. Russian technology transfer is key for India, as no other country thus far has agreed to share its most sensitive technologies.

With the Russian Duma now clearing the RELOS military logistics pact with India, more military exercises with Russia – which the EU had protested earlier this year – could be expected.

**Labour mobility**  
The India-Russia labour mobility agreement to be announced as the "centrepiece" of Mr. Putin's visit could be a crucial boost for Indian skilled and semi-skilled workers seeking jobs as other Western markets tighten their immigration controls.

Meanwhile, war-weary and heavily-sanctioned Russia is facing a labour shortfall of what is estimated to be about 3.1 million jobs by the end of the decade, and is seeking Indian workers for its construction, technology, and manufacturing sectors.

The visit will be watched most closely for any defence deals, given that the

### Key Highlights & Analysis

#### 1. Symbolic Diplomacy: Optics vs. Strategic Necessity

## Daily News Analysis

- PM Modi's personal reception and warm greeting signal continuity of a trusted strategic partnership.
- The gesture underscores India's stance that bilateral relations will not be dictated by Western pressures.
- However, the government must carefully manage optics, as India is simultaneously negotiating:
  - India-EU FTA
  - India-U.S. FTA
  - High-level visits from U.S. and EU leaders for Republic Day and strategic dialogues

Demonstrates India's "multi-vector diplomacy" and pursuit of "strategic autonomy."

### 2. Defence Cooperation: Technology Transfer as the Pivot

- Meetings between Defence Ministers of both countries reinforced commitment to:
  - Joint development
  - Technology transfer
  - Strengthening Aatmanirbhar Bharat in defence
- Russia remains India's largest defence partner, especially for:
  - S-400 systems
  - Submarine technologies
  - Aircraft engines
- The Russian Duma recently approved the RELOS logistic pact, allowing deeper joint military exercises, which Europe has earlier criticized.

Critical point: Russian tech transfer is unmatched; Western nations rarely share high-end defence technology.

### 3. Energy & Trade: Navigating Sanctions and Rebalancing Imports

- India's import of Russian oil surged from 2% pre-2022 to about 40% over the last year.
- Due to increasing U.S. scrutiny and sanctions, India may reduce crude imports, replacing them with:

## Daily News Analysis

- Russian commodities
- Fertilisers
- Coking coal
- Metals
- Bilateral trade expanded from \$10 bn to \$68.7 bn, but is heavily imbalanced in Russia's favour.
- Discussions include:
  - Boosting Indian exports of food, apparel, machinery
  - Operationalising the Eastern Maritime Corridor (Chennai–Vladivostok)
  - Progress on an India–EAEU FTA

India is using trade diversification to manage geopolitical risk.

### 4. Labour Mobility Agreement: A New Strategic Frontier

- Expected to be the centrepiece of the summit.
- Russia faces a 3.1 million worker shortfall, especially in:
  - Construction
  - Manufacturing
  - Technology
- India seeks new labour markets due to tightening immigration norms in the West.

Significance: Enhances soft power, remittances, and employment opportunities for skilled/semi-skilled Indians.

### 5. Nuclear & High-Technology Cooperation

- Talks on small modular reactors (SMRs) with Russia's Rosatom have intensified.
- India is considering five indigenous SMRs, with both Russia and EU countries competing for participation.
- Nuclear cooperation remains a stable and less controversial area of India–Russia ties.

## Daily News Analysis

### Conclusion

President Putin's state visit reflects India's continued pursuit of strategic autonomy—strengthening old partnerships while simultaneously expanding ties with the West. While the summit reinforces India–Russia defence, energy, labour, and technology cooperation, it also demands careful diplomatic balancing, given upcoming engagements with the U.S. and EU. For India, the challenge lies in converting this historical partnership into a more economically balanced, technologically advanced, and mutually beneficial relationship, without allowing geopolitical pressures to derail its broader foreign policy objectives.

### UPSC Prelims Practice Question

**Ques:** With reference to India–Russia relations, consider the following statements:

1. India and Russia hold an annual bilateral summit under a formal intergovernmental arrangement.
2. India is negotiating a Free Trade Agreement (FTA) with the Eurasian Economic Union (EEU).
3. India imports more than 40% of its crude oil from Russia as of 2024–25.

**Which of the statements given above is/are correct?**

- A. 1 and 2 only
- B. 2 and 3 only
- C. 1 and 3 only
- D. 1, 2 and 3

**Ans: d)**

### UPSC Mains Practice Question

**Ques:** India's strategic partnership with Russia continues to deepen despite Western sanctions and geopolitical tensions." Discuss the major areas of cooperation highlighted during President Putin's 2025 visit and analyse the challenges India faces in balancing its ties with Russia and the West. **(150 Words)**

## Daily News Analysis

### Page 04 : GS 3 : Environment / Prelims

The Bombay Natural History Society (BNHS), India's premier wildlife research organisation, has announced that six critically endangered vultures—slender-billed and white-rumped—will be released into the wild in Assam in January 2026. This marks a major step in India's vulture recovery programme, following decades of population crash due to diclofenac poisoning. The initiative aligns with the Action Plan for Vulture Conservation (2020–2025) and India's long-term biodiversity goals.

## Daily News Analysis

# Wildlife body BNHS to release 6 critically endangered vultures in Assam in 2026

**Purnima Sah**

MUMBAI

The Bombay Natural History Society (BNHS), which has successfully bred more than 800 vultures in its conservation breeding centres across India, is now preparing to release six vultures in Assam in January 2026.

BNHS scientists on Thursday said they are finalising the dates to release three male and as many female slender-billed and white-rumped vultures, aged between two and three years, in Assam's Kamrup and Biswanath districts. They were bred at BNHS Vulture Conservation Breeding Centre in Rani, Kamrup district.

About the selection of Kamrup and Biswanath districts as the location to release the vultures, BNHS Senior Scientist and Assistant Director Dr. Sachin Ranade explained, "These locations fall within the natural range of vultures where there are already a

White-rumped vulture at BNHS Vulture Conservation Breeding Centre in Kamrup district. SPECIAL ARRANGEMENT

small flock of them and Biswanath is closer to Kaziranga National Park."

"The vultures will be kept there for a minimum of three months to experience the surrounding nature and adapt. During this time, they will observe other scavengers and become familiar with the environment. Since they have been bred in captivity – even though the enclosures are large – this will be their first experience of

true wilderness."

"Vultures live in flocks, attain maturity after the age of five, and can live up to 50 to 60 years. They have high immunity and do not easily catch infections or diseases," the BNHS scientists said. The founder stock (parents of these vultures) was collected from different parts of Assam. Dr. Ranade said the slender-billed vulture is mainly found in Assam, whereas white-

rumped vultures are found across India.

Currently, India is home to about 20,000 vultures across nine species, including bearded vulture, griffon vulture, and cinereous vulture.

The endangered species are the Egyptian vulture and the Himalayan griffon vulture, while the critically endangered species include the red-headed vulture, white-rumped vulture, long-billed vulture, and slender-billed vulture.

The scientists are working with local communities to save vultures in their natural habitats. The BNHS team, supported by the Royal Society for the Protection of Birds (RSPB) and the Assam Forest Department, has been working for over 15 years to prepare the ground for the release.

They are conducting village-level meetings and educating villagers about vultures and their importance.

## Key Points & Analysis

### 1. Why This Release Matters

- The six vultures (3 male + 3 female), aged 2–3 years, were bred at the BNHS Vulture Conservation Breeding Centre, Rani (Kamrup district).
- This is part of a 15+ year effort to revive vulture populations after they collapsed by more than 95% in the 1990s–2000s.

### 2. Why Kamrup & Biswanath?

- These districts fall within the natural range of the two species.

## Daily News Analysis

- They already have small existing vulture flocks.
- Biswanath district is close to Kaziranga National Park, a key ecological habitat.

Ecological significance: Releasing captive-bred individuals into areas with existing flocks increases survival success due to social behaviour and food source availability.

### 3. Rewilding Process

- The vultures will be kept in soft-release enclosures for at least 3 months.
- They will:
  - acclimatise to natural surroundings,
  - observe other scavengers,
  - learn feeding cues,
  - adapt to diverse weather conditions.
- Vultures mature at 5 years and can live 50–60 years.

This staged rewilding is crucial because these vultures were born in captivity.

### 4. Vulture Status in India

India has ~20,000 vultures across nine species, including:

- Critically Endangered:
  - White-rumped vulture
  - Long-billed vulture
  - Slender-billed vulture
  - Red-headed vulture
- Endangered:
  - Egyptian vulture

## Daily News Analysis

- Himalayan griffon

The two species being released (slender-billed & white-rumped) are among the most threatened.

Vultures are keystone scavengers; their decline led to rise in feral dogs & spread of rabies.

### 5. Role of BNHS, RSPB & Assam Forest Department

- BNHS has bred 800+ vultures across its centres.
- Supported by the Royal Society for the Protection of Birds (RSPB).
- Extensive community outreach is ongoing:
  - village meetings,
  - awareness about avoiding diclofenac-use in livestock,
  - creating vulture-safe zones.

Significance: Conservation depends heavily on local community participation.

### Conclusion

The planned release of six critically endangered vultures in Assam is a landmark step in India's vulture conservation strategy. It reflects successful ex-situ breeding, strong scientific planning, and collaboration between BNHS, RSPB, and the Assam Forest Department. If implemented effectively, this could accelerate the revival of vulture populations in the eastern Himalayan ecosystem, strengthening India's broader biodiversity commitments and ecological balance.

## Daily News Analysis

### UPSC Prelims Practice Question

**Ques : With reference to vulture conservation in India, consider the following statements:**

1. The slender-billed vulture is found only in Assam.
2. The white-rumped vulture is listed as Critically Endangered.
3. Vultures mature early, usually by the age of two.

**Which of the statements given above is/are correct?**

- A. 1 and 2 only
- B. 2 only
- C. 1 and 3 only
- D. 1, 2 and 3

**Ans: b)**

### UPSC Mains Practice Question

**Ques : Critically evaluate India's Action Plan for Vulture Conservation (2020–25). What challenges remain in restoring vulture populations to their historical levels? Suggest measures. (150 words)**

## Daily News Analysis

### Page : 06 : GS 2 : Governance/ Prelims

The Department of Posts has released a draft amendment to the Post Office Act, 2023 proposing a transformative digital addressing framework called DHRUVA (Digital Hub for Reference and Unique Virtual Address). This system aims to modernise India's addressing architecture by replacing long textual addresses with UPI-style digital address labels (e.g., name@entity), significantly improving logistics, e-commerce efficiency, and public service delivery. It is part of India's broader Digital Public Infrastructure (DPI) push.

## Postal department considers UPI-like 'labels' for addresses

The system, called DHRUVA, will provide users a convenient way to share their addresses across platforms; users can grant firms limited address access, after which the label needs re-authorisation

**Aroon Deep**  
NEW DELHI

The Department of Posts this week released a draft amendment to the Post Office Act, 2023, aimed at introducing an interoperable, standardised, and user-centric addressing system called the Digital Hub for Reference and Unique Virtual Address, or DHRUVA. The framework has been under consultation for a few months, with one key element, DIGIPIN, rolled out in March.

A senior official involved in DHRUVA's implementation said it would be able to replace textual addresses with email or UPI address-like labels such as "name@entity", which would act as a proxy for a physical address.

The government hopes to build this system as part of its digital public infrastructure initiatives and will allow private companies to participate.

The department is hoping to draw interest from e-commerce and gig platforms, where users need to provide addresses across

### Smart addresses

A draft amendment seeks to enable an interoperable system replacing physical addresses with smart labels like "name@entity" powered by DIGIPIN for precise geolocation

- Labels will be provided by address service providers, while consent architecture will be managed by address information agents
- It will be based on the DIGIPIN system, which is a 10-character alphanumeric expression of latitude and longitude coordinates
- The technology was developed to provide more precise locations in rural areas or in cases where the textual expression of a physical address does not offer adequate information
- The draft amendment is under consultation; Section 8 entity proposed (like NPCI for UPI)
- The system will be built as part of government's digital public infrastructure initiatives, and will allow private firms to participate

multiple services. On these platforms, individuals would be able to provide a label instead of an address and authorise firms to receive the geographic coordinates and full text of their address instantly, instead of filling out address forms repeatedly.

The draft amendment would allow the postal department to set up a Section 8 not-for-profit entity under government supervision. The body would play a role similar to the National Payments Corporation of India, which is an association of banks administering the UPI payments system.

### Consent-based

Users would be able to authorise companies to view their address for a specified period if they wish, after which a given label will require re-authorisation.

There is no compulsion

in the draft amendment for private players to join, the official said, and the department hopes the system will be compelling enough for firms and users to sign up.

Labels will be provided by address service providers, and the consent architecture will be managed by address information agents, or AIAs.

### DIGIPIN system

The DIGIPIN system is the foundational layer for this service, the official said. DIGIPIN is a 10-character alphanumeric expression of latitude and longitude. The technology was developed to provide more precise locations in rural areas or in cases where the textual expression of a physical address does not offer adequate information.

DIGIPIN was open-sourced by the department, and each DIGIPIN corresponds to a roughly 14 square metre patch of land, with a mathematical function deterministically generating a unique code. This translates to around 228 billion DIGIPINs in Indian territory.

### Key Points & Analysis

#### 1. What is DHRUVA?

## Daily News Analysis

- An interoperable, standardised, user-centric digital addressing system.
- Works like email IDs or UPI handles: example: abhay@india could represent a full physical address.
- Users can share this label instead of filling detailed addresses repeatedly on e-commerce, gig, and delivery platforms.

### 2. Consent-Based Address Sharing

- Users can allow companies to read full address details or geocoordinates instantly through the DHRUVA label.
- Access is:
  - time-bound,
  - consent-based,
  - requires re-authorisation after expiry.

Importance: Strengthens data privacy, ensures minimal data sharing.

### 3. Institutional Structure

- Amendment enables creation of a Section 8 (not-for-profit) entity, similar to NPCI, to run the system.
- Private players (like Amazon, Zomato, Swiggy, Dunzo) may voluntarily join.

Note: Government expects the system to become organically popular due to convenience.

### 4. Address Service Providers & AIAs

- Address Service Providers (ASPs): issue digital labels (UPI-like handles).
- Address Information Agents (AIAs): manage user consent and data flow.

This mirrors the architecture of UPI's PSPs and TPAPs → distributed governance + interoperability.

### 5. DIGIPIN: The Technological Core

- DIGIPIN = 10-character alphanumeric code representing latitude + longitude.
- Accuracy: ~14 sq. metres per code.
- 228 billion unique DIGIPINs possible across India.
- Developed to address imprecise rural addresses or informal settlements.

#### Significance:

- Helps emergency services, census, delivery services, public welfare schemes.
- Open-sourced: ensures transparency and innovation.

### 6. Why This Matters for India

- India faces one of the world's largest addressing challenges (unstructured addresses, language diversity).
- DHRUVA will:

## Daily News Analysis

- reduce delivery failures,
- improve e-commerce logistics,
- speed up service delivery,
- support urban planning & disaster management,
- enable geospatial precision for governance.

### Conclusion

The DHRUVA digital address system represents a major leap in India's digital infrastructure journey, aiming to make addresses interoperable, precise, and consent-based. By using UPI-like virtual labels supported by DIGIPIN's geo-coded intelligence, the postal department is positioning India to solve long-standing logistical and administrative challenges. If widely adopted, DHRUVA could become a foundational layer for governance, economic activity, and digital services in the coming decade.

### UPSC Prelims Practice Question

**Ques:** With reference to the DHRUVA system recently proposed by the Department of Posts, consider the following statements:

1. It aims to replace textual physical addresses with interoperable digital address labels.
2. It is fully mandatory for all private e-commerce platforms to join the system.
3. It uses a 10-character alphanumeric code called DIGIPIN to encode geo-coordinates.

**Which of the above statements is/are correct?**

- A. 1 and 2 only
- B. 2 and 3 only
- C. 1 and 3 only
- D. 1, 2 and 3

**Ans: c**

### UPSC Mains Practice Question

## Daily News Analysis

**Ques :** The proposed DHRUVA digital address system has the potential to transform India's public service delivery framework. Discuss the significance of consent-based digital addresses in improving governance efficiency and citizen empowerment. **(250 words)**

**Page 07 : GS 2 : Social Justice**

## Daily News Analysis

Despite major advances in HIV prevention and maternal healthcare, mother-to-child transmission (MTCT) continues to be a significant global public health challenge. A worrying pattern has emerged: infants are testing positive for HIV even though their mothers tested negative during pregnancy. This phenomenon, known as the "silent transmission gap", reveals critical weaknesses in timing, frequency, and follow-up of HIV testing.

### Key Issues & Analysis

#### 1. How HIV Transmits from Mother to Child

HIV can spread:

- during pregnancy (in-utero),
- during delivery,
- during breastfeeding.

Improved antenatal testing and ARV therapy have reduced transmission globally, but gaps persist.

#### 2. Why Babies Get HIV Even When Mothers Test Negative

**a) New Maternal Infections During Pregnancy:** Many women test negative in early pregnancy but acquire HIV later, when viral load is highest, sharply increasing the risk of transmission.

**b) Window Period:** The "window period" is the initial phase after HIV infection when standard tests may be negative despite the virus being present. A woman may test negative, but still be highly infectious.

**c) Single-Test Protocol:** Most programmes recommend only one HIV test in early pregnancy.

No routine repeat testing in:

- late pregnancy,
- at delivery,
- breastfeeding period.

### A worrying pattern of HIV transmission in children

**Cause for concern:** HIV can pass from a mother to her baby during pregnancy, during delivery or through breastfeeding. [More details](#)

**Amol Jaybhe**

Mother to child transmission of HIV remains one of the major challenges in the effort to eliminate HIV in children. Transmission can occur in the womb, at birth during pregnancy, during delivery or through breastfeeding. Over the years, combination antiretroviral therapy for pregnant women living with HIV and medicines for newborns have reduced transmission to near zero in many countries. However, an important concern, transmission to the child in utero, occurs in babies who are still diagnosed with HIV even though their mothers tested negative during pregnancy. This recent news, after the closure of the silent transmission gap, highlights key gaps in testing, timing and follow-up.

Many women test negative in early pregnancy, but may acquire HIV later. If a pregnant woman acquires HIV during pregnancy, her viral load is often very high, which greatly increases the chance of transmitting HIV is high. This means a pregnant woman may test negative despite already acquiring the infection.

Early, out-patient HIV testing is recommended during the early stages of pregnancy. Hence, without repeated

Some babies will diagnosed with HIV even though their mothers tested negative during pregnancy. This worrying pattern is often called the silent transmission gap

testing in the later stages of pregnancy and during breastfeeding, some new mothers will have a high chance of being undetected. This creates a missed opportunity for early treatment and prevention.

The risk of transmission is especially high during the initial phase of HIV during late pregnancy, delivery or the breastfeeding period. Transmission can occur during the birth or during birth or after birth through breast milk.

**What can be done?**

To close this silent gap, the following steps are important:

For mothers: Repeat HIV testing in the later months of pregnancy, testing again at the time of delivery and repeat testing during the breastfeeding period to check for the infection. Additional testing should be carried out for women with repeat infections.

For infants: Early virologic testing soon after birth and repeat follow-up testing if necessary at least once a month.

Prompt treatment must begin in case of a positive result.

**Closing the gap:** The diagnosis of HIV in babies whose mothers test negative during pregnancy, indicates a significant gap in prevention efforts. This is due to a combination of failures in known HIV positive mothers, but mainly due to the occurrence of new infections during the silent transmission period and a lack of repeat testing.

A few basic steps such as improving repeat testing and improving close follow-up especially during pregnancy and breastfeeding should be taken. This will go a long way toward ensuring that essential steps are taken to close this gap.

Dr. Amol Jaybhe is consultant - paediatric infectious diseases, Narayana Health SICU, Childrens Hospital, Mumbai. <http://www.narayanahealth.org>

## Daily News Analysis

This allows newly acquired infections to go undetected.

### 3. Why This Is a Public Health Concern

- Missed maternal infections → missed early initiation of ART.
- Higher infant transmission risk during late pregnancy, delivery, and breastfeeding.
- Hidden burden undermines the global goal to eliminate paediatric HIV.

### 4. What Can Be Done? (Way Forward)

#### For Pregnant Women

- Mandatory repeat HIV testing:
  - in the third trimester,
  - at delivery,
  - periodically during breastfeeding.
- Additional testing for high-risk exposure or symptoms.

#### For Infants

- Early virologic testing (PCR-based testing soon after birth).
- Repeat follow-up tests where needed.
- Immediate initiation of treatment for HIV-positive infants (early ART improves survival drastically).

#### Systemic Strengthening

- Enforce protocols on repeat testing.
- Strengthen antenatal and postnatal follow-up.
- Integrate community counselling and awareness on new infections and window periods.

#### Conclusion

## Daily News Analysis

The rise in HIV infection among infants despite mothers testing negative during pregnancy exposes a silent yet preventable gap in India's and global HIV-prevention strategies. The issue is not treatment failure in known HIV-positive mothers but failure to detect new maternal infections. Strengthening repeat testing, improving clinical follow-up, and ensuring early infant diagnosis are essential for closing this gap. Addressing these shortcomings is crucial to achieving the global goal of eliminating HIV in children.

### UPSC Mains Practice Question

**Ques :** The rise of HIV infections in infants despite mothers testing negative during pregnancy reveals a silent transmission gap in India's maternal healthcare system." Discuss the reasons behind this gap and suggest measures to eliminate mother-to-child transmission of HIV. **(250 Words)**

## Daily News Analysis

### Page 10 : GS 1 : Society & Geography

As China approaches its 15th Five-Year Plan (2026–2030)—envisioned as the “consolidation and full implementation stage” of the goal of achieving socialist modernisation by 2035—its long-term programmes on poverty alleviation and rural revitalisation are beginning to show significant results. The article highlights how targeted State intervention, large public investments, and community participation have transformed remote rural counties across western and central China.

## Daily News Analysis

### China's story of rural revitalisation

As China prepares to enter into its 13th five-year plan, considered to be the consolidation and full implementation period of the goal to realise Socialist modernisation by 2035, the efforts taken up by the administration for poverty alleviation and rural revitalisation are showing results

#### WORLD INSIGHT

Yashwant P. Joshi

**C**hinese President Xi Jinping, with visiting Fujian County of Fuzhou Province in the first year of his second term as general secretary of the Communist Party of China (CPC) in 2022, had noted that eradication of poverty and rural revitalisation were the most important requirements of socialism. He had called for close attention to people in rural areas, saying, "The people with confidence, but on day can be turned into gold." The people of the Xing'an mountainous region of Fujian, which was on the arid and rocky land, said this confidence to turn day into gold, and the people of the region achieved their accomplishment in regard to development, when the funds from the central government were used by the poor, to help to prevent and improve living conditions.

**A stark divide?** China is a land of diversity. The country has a large number of ethnic minorities, with their characteristics' having influenced market economy and growth. The minorities are seen in the urban landscape of the country with its sprawling skyscrapers and towers, but also in the rural areas of the 55 ethnic minorities. While urban China, with its 38 provincial-level cities of Shanghai and Beijing, has moved ahead in terms of development and modernisation to raise up the rest of the country, the rural areas are quiet but strong bastions to Chinese socialism. As China prepares to enter into its 13th five-year plan, considered to be the consolidation and full implementation period of the goal to realise Socialist modernisation by 2035, the efforts taken up by the administration for poverty alleviation and rural revitalisation are showing results.

In China, one can see a regional divide in terms of development and modernisation between the eastern provinces and also along with rural business hubs and sources of employment in the central and western provinces (agriculture, provinces like Guangdong with special economic zones, and so on). The minorities have already benefited from the reforms, as the urban, rural, and agricultural areas have been integrated and Shanghai is a popular destination for business and tourists to facilitate and benefit from the growth of both, but if one moves into the heart of the country, the landscape begins to change.

The regions of poverty programme in former, home of the early people located near the heart of China, and Vietnam bordering Vietnam and Laos, have been the focus of poverty eradication leading to scattered forest and savannas. These areas are on an entirely different trajectory of development compared to shelves or Shanghai. Adhered with hills, mountains and sand, these areas are the last to be integrated into the global asset of a country, the central bank has now posed. If in these soots makes it difficult to move forward.

While the Chinese government imposed no modernisation and development in the rural areas, the central government, one of its economic under former President Deng Xiaoping, poverty alleviation had been taken up in the rural areas. The government has tapped into its abundant

**Becky Lin** A cluster of traditional houses in the Shennan province, China.

up across the country in 1986 to determine poor counties, and draw up criteria for poverty alleviation measures. About 800 counties were initially listed as State-level impoverished counties, which later rose to 250 in 1995. A seven-year programme to lift 80 million people out of poverty was initiated in 1994. This was followed by the "consolidation and full implementation" period of the goal to realise Socialist modernisation by 2035, the efforts taken up by the administration for poverty alleviation and rural revitalisation are showing results.

In China, one can see a regional divide in terms of development and modernisation between the eastern provinces and also along with rural business hubs and sources of employment in the central and western provinces (agriculture, provinces like Guangdong with special economic zones, and so on). The minorities have already benefited from the reforms, as the urban, rural, and agricultural areas have been integrated and Shanghai is a popular destination for business and tourists to facilitate and benefit from the growth of both, but if one moves into the heart of the country, the landscape begins to change.

The regions of poverty programme in former, home of the early people located near the heart of China, and Vietnam bordering Vietnam and Laos, have been the focus of poverty eradication leading to scattered forest and savannas. These areas are on an entirely different trajectory of development compared to shelves or Shanghai. Adhered with hills, mountains and sand, these areas are the last to be integrated into the global asset of a country, the central bank has now posed. If in these soots makes it difficult to move forward.

While the Chinese government imposed no modernisation and development in the rural areas, the central government, one of its economic under former President Deng Xiaoping, poverty alleviation had been taken up in the rural areas. The government has tapped into its abundant

#### THE GIST

With a visit to China, with the emphasis on the Xing'an region, the Chinese government is helping to implement its poverty alleviation and modernisation to bring up the pace of the country's development. The visit is a quiet but strong reinforcement to Chinese socialism.

In the Xing'an region, absolute poverty and development are being integrated, with the setting up of industrial parks, better infrastructure, and poverty alleviation and its components like space utilisation.

In a 2018 visit, the central committee of the CPC noted the Xing'an concentration of the poor and the areas where the poor are also increasing, the government must be alert.

natural resources. The Ministry of Foreign Affairs has provided assistance to the country since 1952, underlining projects in agriculture, education, and healthcare. According to Mr. Xie, the central government has also set up a number of poverty alleviation opportunities. He said that the country has been free from extreme poverty since 2011. The per capita disposable income of 20000 RMB per person.

**The spirit of the people** While government investment and projects have played a major role in the uplift of the rural areas, the spirit of the people to create investment. The Jiaohu village in Yunnan is a model of people's cooperation. Located nearly 50 km away from the county center at an altitude of 2000 m, the village is surrounded by the village to anchor tea trees. Local people believe that these trees, with the help of the government, have been planted for 800 years, bring a revenue to those who live in and are the main income source.

## Daily News Analysis

- 2001–2010: Poverty headcount fell from 10.2% to 3.8%; rural incomes grew 7.6% annually.
- 2020: China declared it had eliminated extreme rural poverty.

Illustrates state-led development + targeted welfare + long-term planning.

### 2. The Urban–Rural & Regional Divide

China demonstrates a striking duality:

- East (Guangdong, Shanghai, Beijing):
  - Globalised, industrialised, integrated with world markets
  - Home to SEZs like Shenzhen and Zhuhai
- Central & Western regions (Sichuan, Yunnan):
  - Mountainous, sparsely populated, historically isolated
  - Slower development, limited connectivity

The rural revitalisation efforts focus on bridging this urban–rural gap, a core CPC priority under Xi Jinping's governance philosophy.

### 3. Development in Remote Regions: Infrastructure & Sustainability

Examples from Sichuan, Yunnan, Malipo, Jinping, and Panzhihua show:

- Massive investments in roads, wind energy, and ecological projects.
- Windmills on high ranges, green cover restoration, water conservation.
- Government tapping natural resources to generate local employment.

Malipo county's case:

- 99% mountainous
- Annual per capita disposable income now 9,000 RMB
- Assistance from:

## Daily News Analysis

- Ministry of Foreign Affairs (since 1992)
- Provincial government
- State-funded enterprises

This ties into China's model of "common prosperity" and state-driven regional equalisation.

### 4. Role of Local Communities: The 'Xichou Spirit'

People's participation is highlighted as essential:

- Residents transformed barren rocky land in Xichou into green productive spaces—called the "Xichou spirit".
- Jiwozhai village's ancient tea cooperative (est. 2014) in Jinping county:
  - Processes 800-year-old tea trees
  - Exports to France, Japan, Vietnam
  - Backed by:
    - 2.8 million RMB investment from Yunnan & Shanghai (inter-provincial support model)
    - Interest-free loans from Ministry of Foreign Affairs
  - Household incomes around 30,000 RMB/year

This signals China's blended model of collective enterprise + State capital + cooperative governance.

### 5. Shift Towards Rural Revitalisation (Post-Poverty Era)

#### China's new focus:

- January 2025: CPC announced the Rural Comprehensive Revitalisation Plan (2025–2027)
- Objectives:
  - Strengthen agricultural productivity (food security)
  - Narrow urban–rural income gap
  - Build rural infrastructure and public services

## Daily News Analysis

- Promote rural industries (tea, tourism, handicrafts)
- Stabilise living standards after removal from poverty lists

Strategic significance: Prevents "return to poverty" and supports long-term rural sustainability.

### Conclusion

China's rural revitalisation story represents a model of state-led, long-range, institutionally backed development, where infrastructure, ecology, poverty reduction, and community participation converge. While large regional disparities persist, China's example shows how sustained political commitment, central planning, and local mobilisation can transform remote mountainous regions into productive, economically integrated areas. For UPSC, it offers strong comparative insights into development strategies, rural transformation, cooperative governance, and poverty eradication models.

# New Delhi's relative isolation, India's tryst with terror

**T**he current period might well be viewed, or termed, as India's moment of reckoning. For one, India today – and despite its highly regarded diplomatic skills – increasingly appears more like an 'outlier' than a major player in world affairs. It has been virtually sitting on the sidelines when it comes to issues involving peace and order in different regions of the globe, especially in West Asia and Europe. It is also a virtual onlooker as far as the emerging situation in the Indo-Pacific is concerned. Seldom indeed has India faced a situation of this kind.

If this was not bad enough, the entire South Asian region in which India is situated, appears to be in turmoil at present. Afghanistan and Nepal are among the countries on India's periphery that appear to be most affected, but from the Maldives to Myanmar and further afield, India can hardly count on many friends and allies. This is a frightening scenario given that each day produces a range of new threats, including cyber.

### Hostility from west to east

Currently, India has to contend with two openly hostile powers on its western and eastern flanks – Pakistan and Bangladesh, respectively. In the case of Pakistan, the threat level has been going up steadily, with a growing cacophony of voices being heard in that country to teach India a proper lesson. What is aggravating the situation further is the approval of the 27th Constitutional Amendment Bill by Pakistan's Joint Parliamentary Committee of the Senate and National Assembly, which has altered the precarious balance between civil and military authority in that country.

Also, a recent amendment has introduced the concept of a new 'Chief of Defence Forces', elevating Field Marshal Asim Munir as the nation's military supremo, and the commander-in-chief of all three services, having sole control over Pakistan's nuclear assets. The amendment has invested Field Marshal Munir with absolute authority to deal with enemies (such as India), removing the fig leaf of parliamentary restraint and posing a real threat to India on its western flank. Military dictatorships in Pakistan, as elsewhere, have traditionally proved to be extremely hostile to a democratic India, and the rise and rise of Field Marshal Asim Munir, with unfettered authority, represents a significant and direct threat to a democratic India.

That such concerns are well merited, and that military dictators tend to be short sighted, is well known. Concentration of power encourages strategic adventurism. This, in turn, increases the chances of miscalculation in crises. Also, and in keeping with the general trend among military regimes, there is likely to be a tendency to turn local conflicts into spheres of proxy competition and inter-state confrontation. Hence, prospects of a lasting peace with Pakistan are unlikely. On the other hand, the risk of conflict has enhanced

**M.K. Narayanan**

is a former Director, Intelligence Bureau, a former National Security Adviser, and a former Governor of West Bengal

significantly. Thus, it would be wise for India not to ignore the possibility of yet another conflict with Pakistan in the near future and be prepared for all eventualities. This may as yet be in the realm of speculation, but the danger must not be ignored.

India's Pakistan problem is compounded by the fact that the interim government in Bangladesh to India's east, is proving unfriendly, if not openly hostile, to it. To add to India's discomfiture, Bangladesh is currently displaying a willingness to establish warmer relations with Pakistan. In a first, a Pakistan navy ship visited Bangladesh after almost a half-a-century and this is expected to help Pakistan re-establish its presence in the Bay of Bengal. This has serious security implications for India.

Hence, a mixture of ideological posturing and military governance on India's western and eastern flanks has raised diplomatic temperatures across the region. It could have serious and adverse consequences, if not properly handled. Extreme vigilance and careful manoeuvring is called for.

### The surfacing of 'urban terror'

Compounding India's problems at this time is the return of 'urban terror' after a gap of several years, though in a different mould, and by a whole new set of indigenous actors. It is only fair to think that in the highly disparate world that we live in, and in the circumstances prevailing today, terror is merely a hand's length away from everyday existence. Yet, till recently, urban terrorism on a significant scale had taken a back seat after the 2008 terror attacks in Mumbai sponsored by Pakistan-based Lashkar-e-Taiba and Jaish-e-Mohammed in collusion with elements of the Pakistan military establishment.

During the past two decades, sporadic terror attacks had been reported in certain urban pockets, but the latest module of urban terror – extending from Jammu and Kashmir to Faridabad and Delhi, and involving medical practitioners and doctors (most of whom had connections to the Al-Falah university, Faridabad, Haryana) reveals a new chapter in India's tryst with terrorism.

The latest terror module, comprising almost only medical practitioners, draws inspiration from, and harps back to the destruction of the Babri Masjid in Ayodhya (in 1992). It fundamentally differs from the terror attacks witnessed in Mumbai (and certain other pockets) during 1992-1993 in the wake of the Babri Masjid demolition, which were mainly carried out by 'lumpen' elements.

That more than three decades after the destruction of the Babri Masjid, terror still finds supporters and that too among the educated elite. That is it more so among groups, such as doctors, is highly disturbing. It reveals that religious terrorism is not only alive but still active.

Also, its newest disciples represent some of the best and brightest elements of a community. This

The country is having to deal with being an onlooker in world affairs, and also the fault lines in its multi-cultural, multi-religious society

is a quantitative and qualitative leap as far as the annals of terror are concerned.

Details of the terror module, which extends from Srinagar to Faridabad to Delhi, have been widely aired. But what should cause more serious and deep concern is that they could accumulate nearly 3,000 kilograms of explosive material and also safely hide it in two houses. Further, it is alarming that a car laden with explosives could escape the police dragnet around India's capital city, Delhi, and trigger an explosion in the vicinity of Red Fort in the heart of Delhi. This reveals either extremely careful planning at one level, or total ineptness on the part of the authorities, on another. Worse still, while the 1993 terror explosions were carried out by 'lumpen elements' and the 2008 Mumbai attacks were directly sponsored by Pakistan, the latest incidents were of an entirely different character.

These were organised by a group of medical professionals, some of whom were perhaps not even born when the destruction of the Babri Masjid took place, revealing a major fault line in India's multi-cultural, multi-religious society. Far more than the details of the terror module that are being revealed through painstaking investigation, it is this aspect, and the aspect of revenge, which has been the catalyst for some of the best and brightest in a community, which should be seen as a blot on India's civilisational journey and progress.

The moot point is whether the latest incident represents mere disenchantment and anger against the nation state, or something more fundamental. It has been India's belief, and as claimed by the Union Home Minister in Parliament, that no local had joined a terrorist group in Jammu and Kashmir in recent times.

This myth has been exploded. Investigations have revealed that this is an entirely local terrorist module, which had been using encrypted channels for indoctrination, coordination, fund movements and logistics. Another aspect is that funds were being raised by professional and academic networks under the guise of social/charitable causes. There are other reports that the groups were in touch with elements in Pakistan. The links of the group also seem to extend beyond Pakistan to the United Arab Emirates, Saudi Arabia and Türkiye.

### The need for vigil

Given the new perilous external dimension to India's security, a hostile Pakistan and Bangladesh on its western and eastern borders, and the fact that much of West and South Asia are in turmoil, India needs to be careful that the situation does not lead to the fostering of religious fascism on a more extended scale. Given India's tolerance and acceptance of disparate religious beliefs, this may seem unlikely. But eternal vigilance (or diligence) is the price that needs to be paid to ensure that the situation does not deteriorate further, necessitating cause for alarm.

## Daily News Analysis

### GS-1 : Indian Society & Geography

**UPSC Mains Practice Question :** Indian cities are increasingly becoming vulnerable to climate extremes, and traditional urban planning metrics are failing to capture this new reality. In this context, discuss the challenges posed by climate change to India's urban centres and suggest a resilient urban planning framework. (250 words)

### Context :

The article argues that India is entering a challenging geopolitical phase marked by strategic isolation, worsening neighbourhood relations, and a renewed wave of domestic 'urban terror'. The author, a former National Security Adviser, warns that India faces simultaneous threats: unstable neighbours, rising military dominance in Pakistan, hostility from Bangladesh, and newly emerging indigenous terror modules. The situation demands increased vigilance, diplomatic recalibration, and domestic cohesion.

#### 1. India's Emerging Diplomatic Isolation

##### a. India as an 'Outlier'

- Despite India's diplomatic activism, it is increasingly absent from major global conversations on peace and conflict.
- India is sidelined in:
  - West Asia (Israel–Hamas conflict, Red Sea crisis)
  - Europe (Ukraine–Russia war)
  - Indo-Pacific (U.S.–China rivalry, AUKUS, QUAD challenges)

This perception of India "sitting on the sidelines" undermines its claim to being a decisive global player.

#### 2. Perilous Neighbourhood: Crisis Across South Asia

##### a. Regional Turmoil

Almost every country around India is unstable:

- Afghanistan: Taliban rule, extremist networks

## Daily News Analysis

- Nepal: political flux, China's increasing influence
- Maldives: anti-India rhetoric
- Myanmar: civil war and refugee flows

This has reduced India's influence in its immediate neighbourhood.

### 3. Hostility from Both Flanks: Pakistan and Bangladesh

#### a. Pakistan – Rising Military Adventurism

Pakistan's threat perception is worsening due to:

- 27th Constitutional Amendment Bill reducing civilian control over military
- Creation of a new post: Chief of Defence Forces
- Field Marshal Asim Munir now holds absolute authority over:
  - The three armed services
  - Nuclear arsenal
  - Decisions on war and conflict

Implication: Military dictatorships historically adopt aggressive postures toward India → Risk of miscalculation and renewed conflict increases.

#### b. Bangladesh – From Friendly to Unfriendly?

The interim government in Bangladesh shows:

- Diplomatic frostiness toward India
- Move to improve ties with Pakistan
- A Pakistan Navy ship visiting Bangladesh after 50 years → This creates security concerns in the Bay of Bengal.

The author highlights that both eastern and western borders pose threats simultaneously, a rare and dangerous situation.

### 4. Return of "Urban Terror": A New Internal Security Challenge

## Daily News Analysis

### a. New Terror Module – A Disturbing Shift

- A terror module stretching from Srinagar → Faridabad → Delhi
- Involves doctors and medical practitioners, not lumpen elements
- Connected with Al-Falah University, Haryana
- Motivated by “revenge” for Babri Masjid (1992) despite being born years after the event
- Accumulated 3,000 kg explosives, hid them in residential areas
- Managed to detonate an explosive-laden car near Red Fort

#### Key shift:

Earlier terror waves were:

- 1993 → by criminal elements
- 2008 → Pakistan-sponsored
- But 2024-25 module is:
- Totally local
- Highly educated
- Ideologically radicalized
- Using encrypted communication

This signals a worrying trend of homegrown radicalisation among the educated elite.

### b. Implications for Internal Security

- Myth shattered: “No local joins terror in J&K.”
- Funds raised through professional, academic, and charitable networks.
- Links extend beyond Pakistan to UAE, Saudi Arabia, Türkiye.

This is a qualitative leap in terror threats.

### 5. What Should India Do? – Need for Vigilance & Strategic Recalibration

## Daily News Analysis

### a. External Threats

- India must prepare for a possible military confrontation with Pakistan.
- Must manage Bangladesh carefully to prevent strategic drift.
- Re-engage with South Asia and restore influence.

### b. Internal Security

- Strengthen intelligence coordination across states.
- Monitor radicalisation within universities and professional networks.
- Improve cyber-surveillance on encrypted channels.

### c. Preventing "Religious Fascism"

The author warns that external hostility combined with internal radicalisation could polarize society. India's strength lies in:

- Pluralism
- Religious coexistence
- Democratic institutions

These must be protected through vigilance and social harmony.

### Conclusion

India today faces a dual-front challenge: strategic isolation internationally and renewed internal terror domestically. The combination of military authoritarianism in Pakistan, shifting alignments in Bangladesh, and emerging urban terror modules among educated youth poses serious threats to national security. The way forward is eternal vigilance, smarter diplomacy, and stronger internal cohesion. India must reclaim strategic space abroad while ensuring that internal radicalisation does not undermine the country's civilisational fabric.
